**Computer Programming and Analysis Co-op**, Niagara College.

**Relevant Coursework:** Git; Frontend web development courses including HTML, CSS and JavaScript; SQL Database; Python for data analysis and introduction to machine learning using Python; .NET development and object-oriented programming in C#.

## PROJECTS

### Mortgage calculator with a spin Feb2023

- A web page that helps users calculate the price of the home that they can afford based on how much money the user can pay a month, the down payment they can pay and the interest rate they will get.
- This project helped me understand Frontend web development by using HTML, CSS and JavaScript in one project.

### Machine Learning model for wind speed prediction Apr2023

- Designed and implemented a linear machine learning model in Python that uses data from the Welland weather station to predict wind speed based on weather temperature.

### Mock website for an engine repair company (Team project) Dec2023

- Designed and implemented a website Using HTML, CSS and JavaScript.
- The website enables employees to add customers to the system, add the customer equipment, make a repair request and go through the repair process.

## CERTIFICATES

### Google Advanced Data Analytics Certificate

- On the path to completing the Google Advanced Data Analytics Certificate by March.
- It focuses on Using Excel, SQL, Python and Power BI to transform datasets into useful and easy to understand visualized data that can answer questions and improve business models.

## WORK EXPERIENCE

### STARBUCKS

#### Shift Supervisor (May 2023 – Present)

- Supervise and coordinate daily store operations, ensuring adherence to Starbucks standards and policies.
- Manage and lead a team of baristas, providing training, guidance, and support to ensure optimal performance.
- Monitor and maintain inventory levels, place orders, and manage deliveries to ensure adequate stock.
